What would be the expression for $K_{\mathrm{c}}$ for the reaction

$$
4 \mathrm{NH}_{3}(\mathrm{~g})+5 \mathrm{O}_{2}(\mathrm{~g}) \rightleftharpoons 4 \mathrm{NO}(\mathrm{~g})+6 \mathrm{H}_{2} \mathrm{O}(\mathrm{~g})
$$

at equilibrium?

1. $\left[\mathrm{NH}_{3}\right]^{4}\left[\mathrm{O}_{2}\right]^{5}$
2. $[\mathrm{NO}]^{4}\left[\mathrm{H}_{2} \mathrm{O}\right]^{6}$
3. $\frac{\left[\mathrm{NH}_{3}\right]^{4}\left[\mathrm{O}_{2}\right]^{5}}{[\mathrm{NO}]^{4}\left[\mathrm{H}_{2} \mathrm{O}\right]^{6}}$
4. $\frac{[\mathrm{NO}]^{4}\left[\mathrm{H}_{2} \mathrm{O}\right]^{6}}{\left[\mathrm{NH}_{3}\right]^{4}\left[\mathrm{O}_{2}\right]^{5}}$ correct
5. $\frac{[\mathrm{NO}]^{4}\left[\mathrm{H}_{2} \mathrm{O}\right]}{\left[\mathrm{NH}_{3}\right]^{4}}$

## Explanation:

To write $K_{\mathrm{c}}$ for a balanced chemical reaction, multiply the concentrations of the products divided by the same (multiply the concentrations) for the reactants, each raised to its coefficient in the reaction.

A mixture of $\mathrm{PCl}_{5}(\mathrm{~g})$ and $\mathrm{Cl}_{2}(\mathrm{~g})$ is placed into a closed container. At equilibrium it is found that $\left[\mathrm{PCl}_{5}\right]=0.75 \mathrm{M},\left[\mathrm{Cl}_{2}\right]=0.1 \mathrm{M}$ and $\left[\mathrm{PCl}_{3}\right]=0.09 \mathrm{M}$.

$$
\mathrm{PCl}_{5} \rightleftharpoons \mathrm{PCl}_{3}+\mathrm{Cl}_{2}
$$

What is the value of $K_{\mathrm{c}}$ for the reaction?

1. 0.012 correct
2. 0.006
3. 3
4. 0.024
5. 0.036

## Explanation:

$\left[\mathrm{PCl}_{5}\right]=0.75 \mathrm{M}$
$\left[\mathrm{Cl}_{2}\right]=0.1 \mathrm{M}$
$\left[\mathrm{PCl}_{3}\right]=0.09 \mathrm{M}$

$$
\begin{aligned}
K_{\mathrm{C}} & =\frac{\left[\mathrm{Cl}_{2}\right]\left[\mathrm{PCl}_{3}\right]}{\left[\mathrm{PCl}_{5}\right]}=\frac{(0.1 \mathrm{M})(0.09 \mathrm{M})}{0.75 \mathrm{M}} \\
& =0.012 \mathrm{M}
\end{aligned}
$$

## Msci 170614 <br> 00310.0 points

A 10.0 L vessel contains 0.0015 mole $\mathrm{CO}_{2}$ and 0.10 mole CO. If a small amount of carbon is added to this vessel and the temperature is raised to $1000^{\circ} \mathrm{C}$

$$
\mathrm{CO}_{2}(\mathrm{~g})+\mathrm{C}(\mathrm{~s}) \rightleftharpoons 2 \mathrm{CO}(\mathrm{~g})
$$

will more CO form? The value of $K_{\mathrm{c}}$ for this reaction is 1.17 at $1000^{\circ} \mathrm{C}$. Assume that the volume of the gas in the vessel is 10.0 L .

1. Yes, the rate of the forward reaction will increase to produce more CO. correct
2. No, the rate of the reverse reaction will increase to produce more $\mathrm{CO}_{2}$.
3. Unable to determine this from the data provided.

## Explanation:

$[\mathrm{CO}]=\frac{0.1 \mathrm{~mol}}{10 \mathrm{~L}} \quad\left[\mathrm{CO}_{2}\right]=\frac{0.0015 \mathrm{~mol}}{10 \mathrm{~L}}$
Carbon, being a solid, has no effect on equilibrium.

$$
[\mathrm{Q}]=\frac{[\mathrm{CO}]^{2}}{\left[\mathrm{CO}_{2}\right]}=\frac{\left(\frac{0.1}{10.0} \mathrm{M}\right)^{2}}{\left(\frac{0.0015}{10.0} \mathrm{M}\right)}
$$

$$
=0.666667<K_{\mathrm{c}}=1.17
$$

Therefore equilibrium will shift to the right.

The reaction

$$
\mathrm{Br}_{2}(\mathrm{~g})+3 \mathrm{~F}_{2}(\mathrm{~g}) \rightleftharpoons 2 \mathrm{BrF}_{3}(\mathrm{~g})
$$

is exothermic in the forward direction. An increase in the partial pressure of $\mathrm{BrF}_{3}$ in this reaction at equilibrium would be favored by a (higher, lower) total pressure and by a (higher, lower) temperature.

1. higher; lower correct
2. higher; higher
3. lower; higher
4. lower; lower

## Explanation:

LeChatelier's Principle states that if a change in conditions occurs to a system at equilibrium, the system responds to relieve the stress and reach a new state of equilibrium. There is more gas on the reactant side of the reaction equation, so adding pressure will cause the reaction to move to the right. The reaction is exothermic; it releases heat. Heat is a product of the reaction. Decreasing temperature will cause the reaction to move to the right.

Calculate the equilibrium constant at $25^{\circ} \mathrm{C}$ for a reaction for which $\Delta G^{0}=-3.45 \mathrm{kcal} / \mathrm{mol}$.

1. 339.157 correct
2. 3391.57
3. -339.157
4. 678.314
5. 169.578

## Explanation:

$T=25^{\circ} \mathrm{C}+273=298 \mathrm{~K}$
$\Delta G^{0}=-3450 \mathrm{cal} / \mathrm{mol}$
At equilibrium

$$
\begin{aligned}
\Delta G^{0}= & -R T \ln K \\
-3450= & (-1.987 \mathrm{cal} / \mathrm{mol} \cdot \mathrm{~K}) \\
& \times(298 \mathrm{~K})(\ln K) \\
K= & 339.157
\end{aligned}
$$

## ChemPrin3e T09 56 <br> $006 \quad 10.0$ points

$K_{\mathrm{c}}=0.100$ at a certain temperature for the reaction

$$
\mathrm{PCl}_{5}(\mathrm{~g}) \rightarrow \mathrm{PCl}_{3}(\mathrm{~g})+\mathrm{Cl}_{2}(\mathrm{~g}) .
$$

At equilibrium, $\left[\mathrm{PCl}_{5}\right]=2.00 \mathrm{M}$ and $\left[\mathrm{PCl}_{3}\right]=$ $\left[\mathrm{Cl}_{2}\right]=1.00 \mathrm{M}$. If suddenly $1.00 \mathrm{M} \mathrm{PCl}_{5}(\mathrm{~g})$, $\mathrm{PCl}_{3}(\mathrm{~g})$, and $\mathrm{Cl}_{2}(\mathrm{~g})$ are added, calculate the equilibrium concentration of $\mathrm{PCl}_{5}(\mathrm{~g})$.

1. 1.35 M

## 2. 4.35 M correct

3. 0.65 M
4. essentially zero
5. 2.35 M

## Explanation:

## ChemPrin3e T09 67 <br> 00710.0 points

For the decomposition of ammonia to nitrogen and hydrogen, the equilibrium constant is $1.47 \times 10^{-6}$ at 298 K . Calculate the temperature at which $K=0.01$. For this reaction, $\Delta H^{\circ}=92.38 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

1. 59 K
2. 241 K

## 3. 390 K correct

4. 117 K
5. 332 K
6. 468 K

## Explanation:

Use the van't Hoff equation.
00810.0 points

Which of the following equilibrium reactions is NOT affected by changes in pressure?

1. $2 \mathrm{CO}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}(\mathrm{g})+\mathrm{O}_{2}(\mathrm{~g})$
2. $\mathrm{H}_{2}(\mathrm{~g})+\mathrm{Br}_{2}(\ell) \rightarrow 2 \mathrm{HBr}(\mathrm{g})$
3. $2 \mathrm{BrCl}(\mathrm{g}) \rightarrow \mathrm{Br}_{2}(\mathrm{~g})+\mathrm{Cl}_{2}(\mathrm{~g})$ correct
4. $\mathrm{H}_{2}(\mathrm{~g})+\mathrm{I}_{2}(\mathrm{~s}) \rightarrow 2 \mathrm{HI}(\mathrm{g})$
5. $2 \mathrm{H}_{2} \mathrm{O}_{2}(\ell) \rightarrow 2 \mathrm{H}_{2} \mathrm{O}(\ell)+\mathrm{O}_{2}(\mathrm{~g})$

## Explanation:
